

2017

B I K E

 | the way *forward*

2017 is set to be the most challenging season ever and we are completely committed to offering **the most innovative and comprehensive bike collection** to date. We must feel really fortunate to live in this technologically highly advanced era with mountain bikes being more sophisticated and evolved thus far.

At Mondraker as a Family, as a Team, as a Company, we are really looking forward for offering cutting-edge performance with **the greatest riding experience**. Just as our motto says: **the way forward**.

F O R W G E O M E

Mondraker's **Forward Geometry** has proven to be the geometry benchmark for **high-end performance** mountain bikes nowadays and this is one of our proprietary most unique leading technologies to date. Every year we keep refining the concept and for 2017 we have applied slight geometry changes to improve performance even more, **increasing riding efficiency and control**.

Forward Geometry main advantages are an increased safety and confidence riding steep chutes even at high speeds, more reactive, precise and direct handling, more uphill precision and more stability in technical and rough terrain with better grip and **improved control overall**.

A close-up photograph of a mountain bike's handlebar and stem. The handlebar is black and features a Shimano SLX shifter. The stem is also black and has a Shimano SLX logo. A blue semi-transparent overlay covers the middle portion of the image, creating a background for the text. The text 'V A R D' is written in large, white, sans-serif capital letters across the top of the blue area. Below it, the letters 'T R Y' are written in smaller, white, sans-serif capital letters, spaced out.

Z

S U S P E N

E

S I O N

Zero is Mondraker's proprietary most efficient, best performing and super capable suspension system. Zero is individually designed, set up and optimised for each full suspension Mondraker model across the range, from Factor 27'5 and 27'5+ trail models to Summum Carbon downhill bikes.

Zero technology main advantages are **Zero power loss** -a completely stable ride when pedalling-, **Zero pedal kickback** -minimum chain growth throughout the suspension travel-, **Zero brake jack** -isolated braking and suspension forces- and what we call **Zero bumps**, its great ability to soak up any type of bump keeping the rear wheel efficiently planted on the ground.

Stealth is the most advanced industrial design and structure optimisation technology in the Mondraker range. **Stealth alloy** encompasses all processes in the creation of the frame, from the industrial design to the specific production of each of its tubes with the calculation of the most **precise details**. Each tube and part is carefully designed to carry out a specific function while striving to achieve the lowest possible weight.

Stealth Carbon is the most advanced **carbon fiber** development and optimisation technology in the Mondraker range. This constantly developing technology brings all the experience gained in making aluminium frames to top of the range carbon fibre to meet the same **innovation**, maximum quality, minimum weight and strength requirements. The result is a frame with the best strength / structural rigidity / lightness ratio, exceptional reliability and a very attractive and **unique 100% Mondraker look**.
